Empowerment and Governance in the Information Society (II): digerati, goverati and the role of ICT4D edit | 3682

By Ismael Peña-López

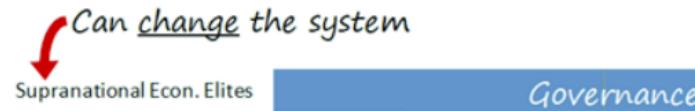

Main categories: e-Government, e-Administration, Politics | ICT4D | Information Society | Participation, Engagement, Use, Activism

Other tags: goverati
[comments: 3]

This is a two-part article on the power relationships and distribution in the Information Society. It first presents, in *Empowerment and Governance in the Information Society (I): the hourglass of information power*, some concepts as power, empowerment and governance, and how they have been distributed amongst citizens and institutions along ages. The second one, *Empowerment and Governance in the Information Society (II): digerati, goverati and the role of ICT4D*, reflects on how the quality of democracy is decreasing precisely because of an increase of citizen empowerment.

In *Empowerment and Governance in the Information Society (I): the hourglass of information power* we described a way to look at power, empowerment and governance, and ended up facing an odd distribution of power in the Information Society. A close up to that distribution may look like the following image:

Distribution of power in the Information Society
