State of the question

The screenshot shows the ICTlogy website homepage. At the top, there is a navigation bar with links for Home, About, ICT4D Blog, and Search Blog. Below the navigation bar, there is an 'About Me' section featuring a profile picture of a man and a short bio. To the right of the 'About Me' section is the 'ICT4D Blog' section, which displays a featured article titled 'Generalization vs. decentralization tensions in the Digital Economy'. Below the 'About Me' and 'ICT4D Blog' sections, there are several columns of links and resources, including 'Resources', 'Follow ICTlogy', and 'Social Networks'. The overall layout is clean and professional, with a focus on providing information and resources related to ICT4D.

The screenshot shows the pGov website homepage. At the top, there is a navigation bar with links for Home, About, Contact, and Search. Below the navigation bar, there is a search bar and a section for 'Search Blogs'. The main content area features a grid of blog posts, including one titled 'Redes Sociales Digitales en los Avatares Españoles'. The layout is modern and user-friendly, with a focus on providing information and resources related to digital government services.

The screenshot shows an email inbox from ICTlogy. The inbox contains several emails, including one from 'Academia.edu' with the subject 'Albert Pedro Solano and Ignacia Ingo de Ward uploaded paper'. The email list is organized by date and includes a 'COMPOSE' button at the top. The overall interface is clean and professional, with a focus on providing information and resources related to digital government services.

About Me

ICT4D Blog

13/04/2017

Centralization vs. decentralization tensions in the Digital Economy

When we speak about Information and Communication Technologies, it is an almost unavoidable mantra to say that this is an era of democratization of technology, of democratization of (access to) information. Meanwhile, we witness how the major technological firms grow, acquire or bury their competitors, keep on growing and concentrate the market in a decreasing number of hands. Which is quite the opposite of the democratization of technology.

Let us simplify things a little bit for the sake of the explanation.

Two of the main reasons for the centralization of production in the Industrial Age were the cost of

Open Government: A simplified scheme

By Ismael Peña-López (@ictlogist), 28 February 2016

Main categories: [e-Government](#), [e-Administration](#), [Politics](#)Other tags: [open_government](#)[6 Comments](#) »

This is a general (though simplified) scheme of what includes the concept of **open government**. This is a very broad concept that is general understood as transparency, or accountability. Sometimes it is taken as government 2.0, as the institutionalization of the web 2.0 and politics 2.0. Some other times it is just confused by mere e-government.

But it is much more than that. And here I try to present a first version of an attempt to relate all the concepts that fall under the big umbrella of open government. Please note that all the scheme *is* open government: what is pictured in the lower left corner, "Open government (meta project)" is how the project itself is presented to the citizen, with its own blog, its own software repository and other institutional relationships with other governments.

The scheme is not comprehensive, but just aims at highlighting the main components.

As for the shapes and colours:

- Orange rhombuses picture agents: politicians, officers, individual citizens, civil society organizations, and the open government team in a given government.
- Black rectangles are processes where decisions are made.
- Green rectangles with the curved lower edge are outputs or presentation of information.
- Gray cylinders are databases or data silos.

Arrows do not have a very accurate meaning. In general, all links are bi-directional: information flows in both ways. When there is an arrow, it implies that information only flows in the sense of the arrow — this look cleaner than double arrows, which would have populated the whole scheme. But, as said, it is more a way to stress some points (e.g. the politician feeds its Twitter account) rather than being a strong statement.

ABSTRACT: In this article, we seek to revisit what the term 'technopolitical' means for democratic politics in our age. We begin with tracing down how the term was used, and then transformed through various and conflicting uses of ICTs in governmental, civil organizations and bottom-up movements. Two main streams can be distinguished: studies about internet-enhanced politics, labelled as e-government and Politics 2.0 that imply facilitating the existing process such as e-voting, e-campaign, and e-petition. The internet-enabled perspective on the other hand builds up on the idea that ICTs are essential for the organization of (or organizing of) contentious politics, citizen participation and deliberative processes. Under a range of liberal studies have often used concepts in an undefined or underspecified manner for describing their scope of investigation. After critically reviewing and categorizing the main literature towards concepts used for describing ICT-based political performances, in this article we construct a conceptual model of technopolitics: A scheme consisting of the six dimensions context, scale, direction, purpose, synchronization, and actors systematizing informal and formal ways of political practices. In the following section we explain the dimensions by real-world examples to illustrate the unique characteristics of each technological action field and the power dynamics that influence them. We conclude by arguing how this systematization will help facilitating academic research in the future.

KEYWORDS: technopolitics, net-parties, social movements, e-democracy, e-participation, e-government, politics 2.0, ICT and politics, ISM, Occupy Wall Street.

1. INTRODUCTION: INTERNET AND POLITICS

We would like to begin by offering a conceptual approach to understand major political forces shaping the future of the Internet and democratic politics. This approach is not very novel but, the context and the complexity of contributions makes it very relevant. We believe that there is an unprecedented level of contingency in politics caused by the communicative effects of the Internet that needs to be captured.

It was not always like this since its inception three decades ago. The features of shareability (Shirky, 2008) since the beginnings of the XXI century, followed by the massive influx of mobile broadband connectivity and social networking sites in society around 2008 both triggered the innovative power

This report aims at providing an overview of the normative and institutional state of art of ICT-mediated citizen participation in Spain. The first section provides an overview of the political and civic liberties framework in Spain. In the second section the landscape of ICT mediated citizen engagement is mapped. In the third section, the report engages with implications of technology mediations for deliberative democracy and transformative citizenship.

This report is the outcome of a collaboration between [IT for Change](#) and Ismael Peña-López, School of Law and Political Science, Universitat Oberta de Catalunya under a research project titled Voice or Chatter? Using a [Structuration Framework](#) Towards a Theory of ICTmediated Citizen Engagement.

The State of the Art reports provide an overview of the normative and institutional state of art of ICT-mediated citizen participation in various countries. They provide an overview of the political and civic liberties framework, the

Abstract:

Las elecciones municipales de España en 2015 trajeron a muchas ciudades españolas lo que se ha calificado como "ayuntamientos de cambio": ayuntamientos cuyos alcaldes y representantes en el gobierno provienen de partidos emergentes del Movimiento del 15M. Esta investigación se centra en el entorno sociopolítico en el que se desarrolla este fenómeno, concretamente en Madrid y Barcelona, las dos mayores ciudades del estado y con

Ruscs i cooperatives: dues alternatives de consum agroalimentari diferents

Ricard Espelt, Ismael Peña-López i Núria Vega

dijous, 18 maig 2017

Comenta

General

Fa tres anys, quan començàvem la **investigació** sobre els grups i les cooperatives de consum agroalimentari de Barcelona, sorgia a la ciutat una nova iniciativa d'arrel francesa: **els ruscs** (La Colmena que Dice Sí, LCQDS). El debat que ha generat l'expansió del nou model al voltant de les pràctiques de l'economia col·laborativa, i la mateixa definició del **cooperativisme de plataforma**, ens ha animat a fer **una investigació per tal de valorar-ne similituds i diferències respecte a les cooperatives**. De fet, dels sis ruscs actius en l'inici de l'estudi, a mitjan març del 2017, ja n'hi ha un de nou, a Gràcia, que va reobrir les portes després d'estar algun temps sense líder-responsable, i sis més estan en fase de construcció.

coop

Dues lògiques contraposades i mots compartits en el relat

Per a una persona amb voluntat d'apropar-se al consum responsable, el discurs que generen els dos models pot resultar semblant: proximitat, desintermediació, autogestió —fins i tot— són termes comuns del relat. En el cas dels ruscs és, a més, un instrument de màrqueting evident. Així, a la pàgina web, es fa èmfasi en el nombre de productors, la seva proximitat i el nombre de productes locals disponibles.

Report, State of the Art: Spain. Voice or chatter? Using a Structuration Framework Towards a Theory of ICT-mediated Citizen Engagement

By: [Jose Luis Pineda](#) (2014-03-28 14:54) [View article](#) [View comments](#)

This report is an analysis on perception of the participation of individuals in the use of ICT-mediated citizen participation systems. The Structuration Framework is used to analyze the process and the role of ICT-mediated citizen engagement. In the third part, the report suggests a series of technology-mediated alternatives for alternative citizenship or transformation citizenship.

Participación electrónica en los municipios. De la emancipación ciudadana a la red de ciudades inteligentes

By: [Jose Luis Pineda](#) (2014-03-28 14:54) [View article](#) [View comments](#)

Este artículo analiza la percepción de la participación de los individuos en el uso de sistemas de participación ciudadana mediada por TIC. Se utiliza el Marco de Estructuración para analizar el proceso y el papel de la participación ciudadana mediada por TIC. En la tercera parte, el informe sugiere una serie de alternativas tecnológicas para la ciudadanía alternativa o transformación.

Ruscs i cooperatives: dues alternatives de consum agroalimentari diferents

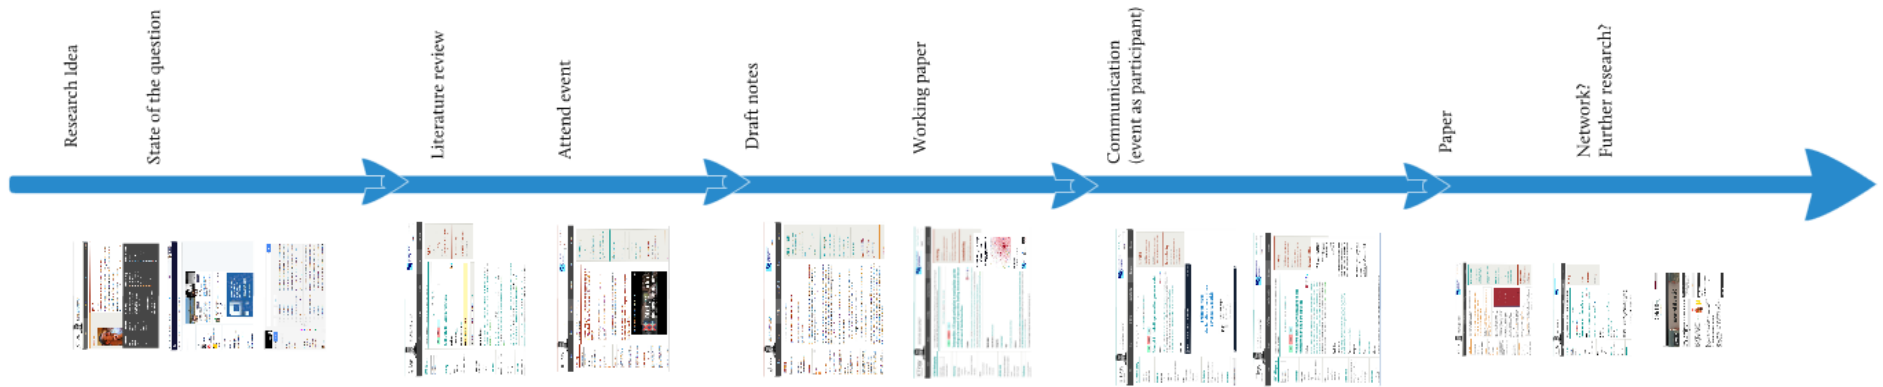

El consum responsable és una manera de consumir que té en compte no només el preu dels productes, sinó també el seu origen, les condicions de producció i el respecte a l'entorn i a la societat.

CRITIC

CRITIC és una iniciativa que té com a objectiu promoure el consum responsable i sostenible. Per això, ofereix informació i recursos per ajudar a les persones a prendre decisions més responsables quan compren productes agroalimentaris.
