Technopolitics, networks and citizenship: a syllabus

By Ismael Peña-López (@ictlogist), 21 August 2016

Main categories: [Cyberlaw](#), [governance](#), [rights](#), [Development](#)

Other tags: [mirela_fiori](#), [technopolitics](#), [urbanism](#)

[No Comments »](#)

My colleague [Mirela Fiori](#) is redesigning the [Master in City and Urbanism](#) which she is directing. In the updated version that she is planning she wants to include a subject on how technology and civic action have a role in the shaping of the city.

In my opinion this is a most important acknowledgement. [Adolfo Estalella](#) and [Alberto Corsín](#) have systematically proved how the city can be used both “hardware”, much in the line of Gidden’s [Structuration Theory](#) where the “system” is both an instrument and a target for change. Manuel Castells also speaks about [cities and their \(different\) role in the Network Society](#), a role that oftentimes is [emergent in the sense of Steve Johnson](#). In newest “[open source](#)” cities, [action turns into activism](#) and activism cannot be without action.

Thus, it does look very relevant to me that there is a little time or space to think about the city not as a mere receptacle of people doing things, but as an actor that is both affected and affecting the uptake of technology and its use for citizen action and, thus, being part of the (new) definition of citizenship.

The goal of the master’s new subject [Technopolitics, networks and citizenship](#) is to provide this vision of the city as an institution, a player that requires a renewed strategy and a renewed vision on its role in a complex ecosystem.

My preliminary syllabus (it does not even deserve that name yet) would include the following topics — comments welcome:

Digital revolution and globalization

How dire are the changes we are witnessing in the global economy? How are connected the new trends in the business and financial spheres with the democratic and governance spheres? Are Information and Communication Technologies instruments for improvement or for transformation? Is this a revolution? Why are some things happening? Why would they last — if they do?

Limits of the institutions of the industrial age

Is there a crisis in industrial age institutions (schools & universities, political parties and parliaments, firms and work, media and journalism, etc.)? What is their role in society? Is their role still needed? Can we separate the content (institutions) from their content (role, tasks)? If yes, who will take up with these roles? How? Why? Why not?

Hacker ethics, commons and gift economy

Is there a new way to design collective initiatives? Is decision-making over as we knew it? Are hierarchies a thing of the past? Is information still power? Can we shift power balances? How different is information from knowledge? How different is controlling information from controlling knowledge? How will the control of knowledge transform our daily practices? And our institutions?

Social innovation, open innovation and open social innovation

Welcome to the ICT4D Bibliography

This is a gathering of literature on subjects related to the impact of Information and Communication Technologies in the society, especially in development. Thus, you'll find readings about the Information Society, the Digital Divide, e-Readiness or Digital Literacy, as core themes, and the Digital Economy, e-Learning, e-Government or Open Access or Free Software as close aspects of ICT4D.

Browse by the menu on the left by **authors**, **categories/tags**, **bibliographies/collections** or **works**; as the database is now quite big, avoid long lists by doing an **advanced search**; or you can also have a look at the **category cloud**:

Open Government: A simplified scheme

By Sirin and Fethiye Sahin 28 February 2014

Open Government is a term used to describe a government that is open to the public and allows citizens to participate in the decision-making process.

The diagram illustrates the Open Government process, showing the flow from Government to Citizens, with various stages and participants involved.

Technologies, ICT based participation in municipalities and the making of a network of open cities. Drafting the state of the art and the case of Medellín, Colombia

by Sirin Sahin

This article discusses the role of technologies in enabling citizen participation in local government and the development of a network of open cities. It highlights the case of Medellín, Colombia, where ICT-based participation has been used to improve urban planning and service delivery.

ICTlog Wiki page titled "Open Government: A simplified scheme". The page features a search bar, a navigation menu, and a main content area with a diagram. The diagram is a flowchart showing the relationship between various entities in an open government scheme. The title "Open Government: A simplified scheme" is prominently displayed. The page also includes a sidebar with navigation options and a footer with the ICTlog logo.

ICTlog Wiki page titled "Category:Indices Governance". The page displays a list of pages under the category "Indices Governance". The list includes items like "A", "B", "C", "D", and "E", each with a brief description. The page also features a sidebar with navigation options and a footer with the ICTlog logo.

ICTlog Wiki page titled "ICT4D blog". The page displays a list of blog posts. The main content area shows a post titled "Technologies, ICT based participation in municipalities and the making of a network of open cities. Drafting the state of the art and the case of Berlin, Austria". The page also features a sidebar with navigation options and a footer with the ICTlog logo.

ICTlog Wiki page titled "ICT & Information Society". The page displays a list of pages under the category "ICT & Information Society". The list includes items like "Technology", "e-Politics", "e-Readiness", "Education", "ICT Information Society", "ICT4D", "Knowledge Management", "Online", "Volunteering", "Open Access". The page also features a sidebar with navigation options and a footer with the ICTlog logo.

ABSTRACT: In this article, we seek to revisit what the term 'technopolitical' means for democratic politics in our age. We begin with tracing down how the term was used, and then transformed through various and conflicting uses of ICTs in governmental, civil organizations and bottom-up movements. Two main streams can be distinguished: studies about internet-enhanced politics, labelled as e-government and Politics 2.0 that imply facilitating the existing process such as e-voting, e-campaign, and e-petition. The internet-enabled perspective on the other hand builds up on the idea that ICTs are essential for the organization of (or organizing of) contentious politics, citizen participation and deliberative processes. Under a range of liberal studies have often used concepts in an undefined or underspecified manner for describing their scope of investigation. After critically reviewing and categorizing the main literature towards concepts used for describing ICT-based political performances, in this article we construct a conceptual model of technopolitics: A scheme consisting of the six dimensions context, scale, direction, purpose, synchronization, and actors systematizing informal and formal ways of political practices. In the following section we explain the dimensions by real world examples to illustrate the unique characteristics of each technological action field and the power dynamics that influence them. We conclude by arguing how this systematization will help facilitating academic research in the future.

KEYWORDS: technopolitics, net-parties, social movements, e-democracy, e-participation, e-government, politics 2.0, ICT and politics, ISM, Occupy Wall Street.

1. INTRODUCTION: INTERNET AND POLITICS

We would like to begin by offering a conceptual approach to understand major political forces shaping the future of the Internet and democratic politics. This approach is not very novel but, the context and the complexity of contributions makes it very relevant. We believe that there is an unprecedented level of contingency in politics caused by the communicative effects of the Internet that needs to be captured.

It was not always like this since its inception three decades ago. The features of shareability (Shirky, 2008) since the beginnings of the XXI century, followed by the massive influx of mobile broadband connectivity and social networking sites in society around 2008 both triggered the innovative power

This report aims at providing an overview of the normative and institutional state of art of ICT-mediated citizen participation in Spain. The first section provides an overview of the political and civic liberties framework in Spain. In the second section the landscape of ICT mediated citizen engagement is mapped. In the third section, the report engages with implications of technology mediations for deliberative democracy and transformative citizenship.

This report is the outcome of a collaboration between [IT for Change](#) and Ismael Peña-López, School of Law and Political Science, Universitat Oberta de Catalunya under a research project titled Voice or Chatter? Using a [Structuration Framework](#) Towards a Theory of ICTmediated Citizen Engagement.

The State of the Art reports provide an overview of the normative and institutional state of art of ICT-mediated citizen participation in various countries. They provide an overview of the political and civic liberties framework, the

Description

This report aims at providing an overview of the normative and institutional state of art of ICT-mediated citizen participation in Spain. The first section provides an overview of the political and civic liberties framework in Netherlands. In the second section the landscape of ICT mediated citizen engagement is mapped. In the third section, the report engages with implications of technology mediations for deliberative democracy and transformative citizenship.

Abstract:

Las elecciones municipales de España en 2015 trajeron a muchas ciudades españolas lo que se ha calificado como "ayuntamientos de cambio": ayuntamientos cuyos alcaldes y representantes en el gobierno provienen de partidos emergentes del Movimiento del 15M. Esta investigación se centra en el entorno sociopolítico en el que se desarrolla este fenómeno, concretamente en Madrid y Barcelona, las dos mayores ciudades del estado y con

Ruscs i cooperatives: dues alternatives de consum agroalimentari diferents

Ricard Espelt, Ismael Peña-López i Núria Vega

dijous, 18 maig 2017

Comenta

General

Fa tres anys, quan començàvem la **investigació** sobre els grups i les cooperatives de consum agroalimentari de Barcelona, sorgia a la ciutat una nova iniciativa d'arrel francesa: **els ruscs** (La Colmena que Dice Sí, LCQDS). El debat que ha generat l'expansió del nou model al voltant de les pràctiques de l'economia col·laborativa, i la mateixa definició del **cooperativisme de plataforma**, ens ha animat a fer **una investigació per tal de valorar-ne similituds i diferències respecte a les cooperatives**. De fet, dels sis ruscs actius en l'inici de l'estudi, a mitjan març del 2017, ja n'hi ha un de nou, a Gràcia, que va reobrir les portes després d'estar algun temps sense líder-responsable, i sis més estan en fase de construcció.

coop

Dues lògiques contraposades i mots compartits en el relat

Per a una persona amb voluntat d'apropar-se al consum responsable, el discurs que generen els dos models pot resultar semblant: proximitat, desintermediació, autogestió —fins i tot— són termes comuns del relat. En el cas dels ruscs és, a més, un instrument de màrqueting evident. Així, a la pàgina web, es fa èmfasi en el nombre de productors, la seva proximitat i el nombre de productes locals disponibles.

Voice or Chatter - Outputs

Description:

This research has been produced with the financial support of Making All Voices Count. Making All Voices Count is a programme working towards a world in which open, effective and participatory governance is the norm and not the exception. This Grand Challenge focuses global attention on creative and cutting-edge solutions to transform the relationship between citizens and their governments. Making All Voices Count is supported by the U.K. Department for International Development (DFID), U.S. Agency for International Development (USAID), Swedish International Development Cooperation Agency, and Omidyar Network (ON), and is implemented by a consortium consisting of Hivos, the Institute of Development Studies (IDS) and Ushahidi. The programme is inspired by and supports the goals of the Open Government Partnership.
